DATA VISUALIZATION FOR DECISION MAKING

PRACTICAL REPORT

Practical 11: Custom Visualizations

Objective: Import and use custom visuals from AppSource to enhance report presentation.

Student Name: Jeel Patel

Enrollment No.: T26084801021/26084801012

Course: M. SC.IT (Data Science)

Semester: 1

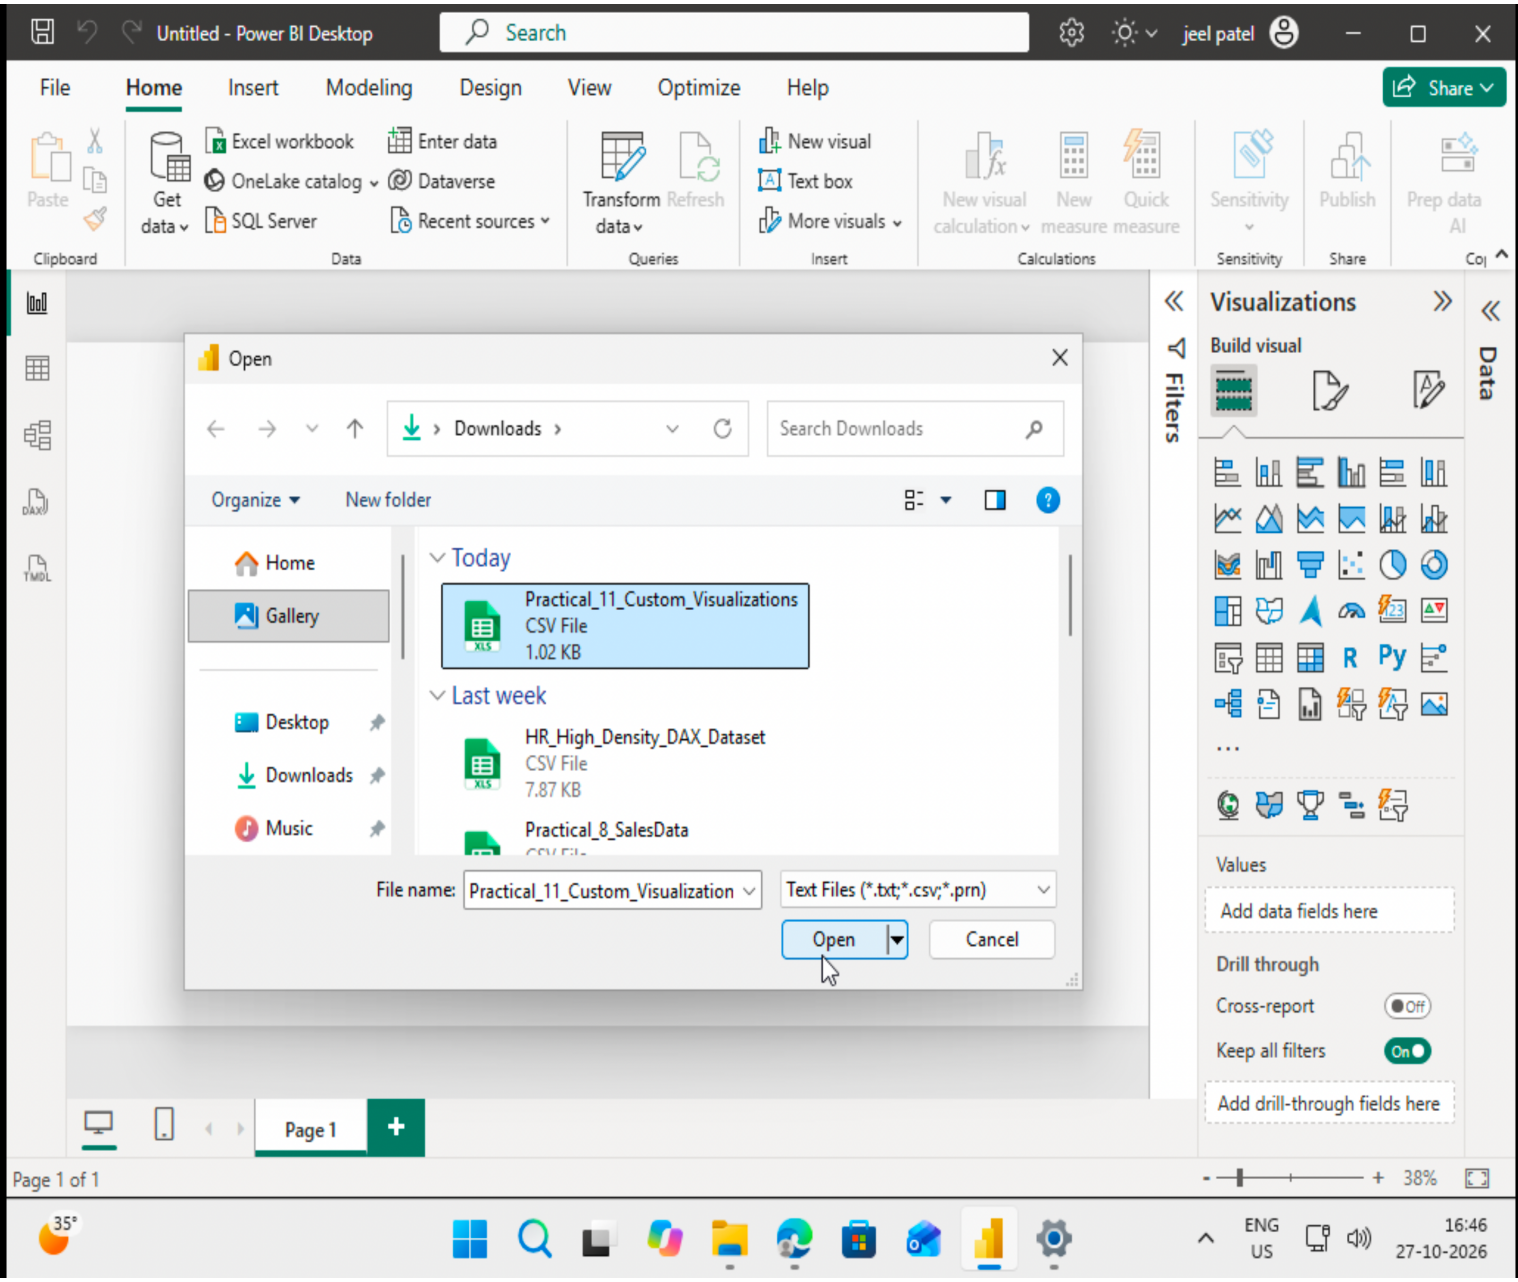

Course Code: P91A3DVD

Academic Year: 2026–27

Steps and result are provided on the following pages.

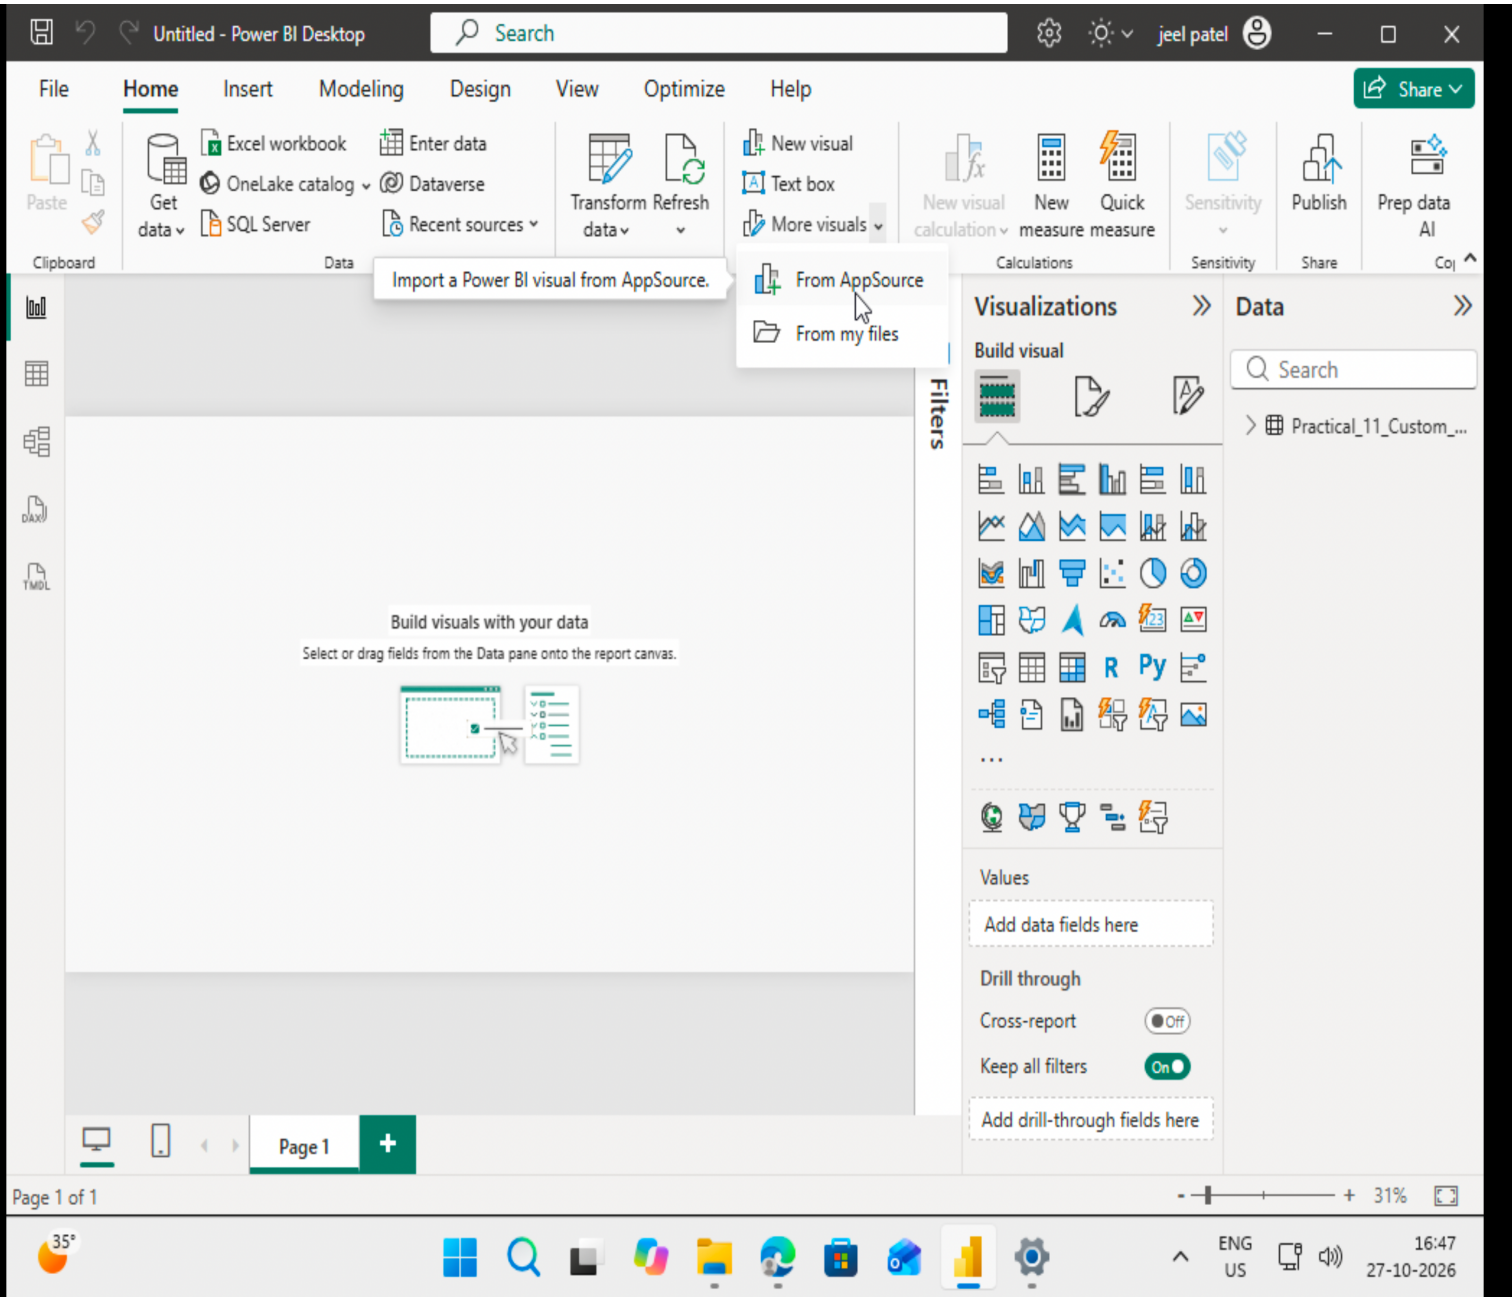

Step 1: Open Power BI Desktop

- Open the Start menu or application search on your computer.
- Search for **Power BI Desktop** and launch the application.
- Open an existing report, such as the HR Data Analysis report, or create a new report.

Step 2: Open the Visualizations Pane

- Go to the Report view in Power BI Desktop.
- Locate the **Visualizations** pane on the right side of the screen.
- Look for the option to get more visuals, usually shown as an ellipsis (...) or an AppSource/get-more-visuals option. The exact interface may vary by Power BI version.

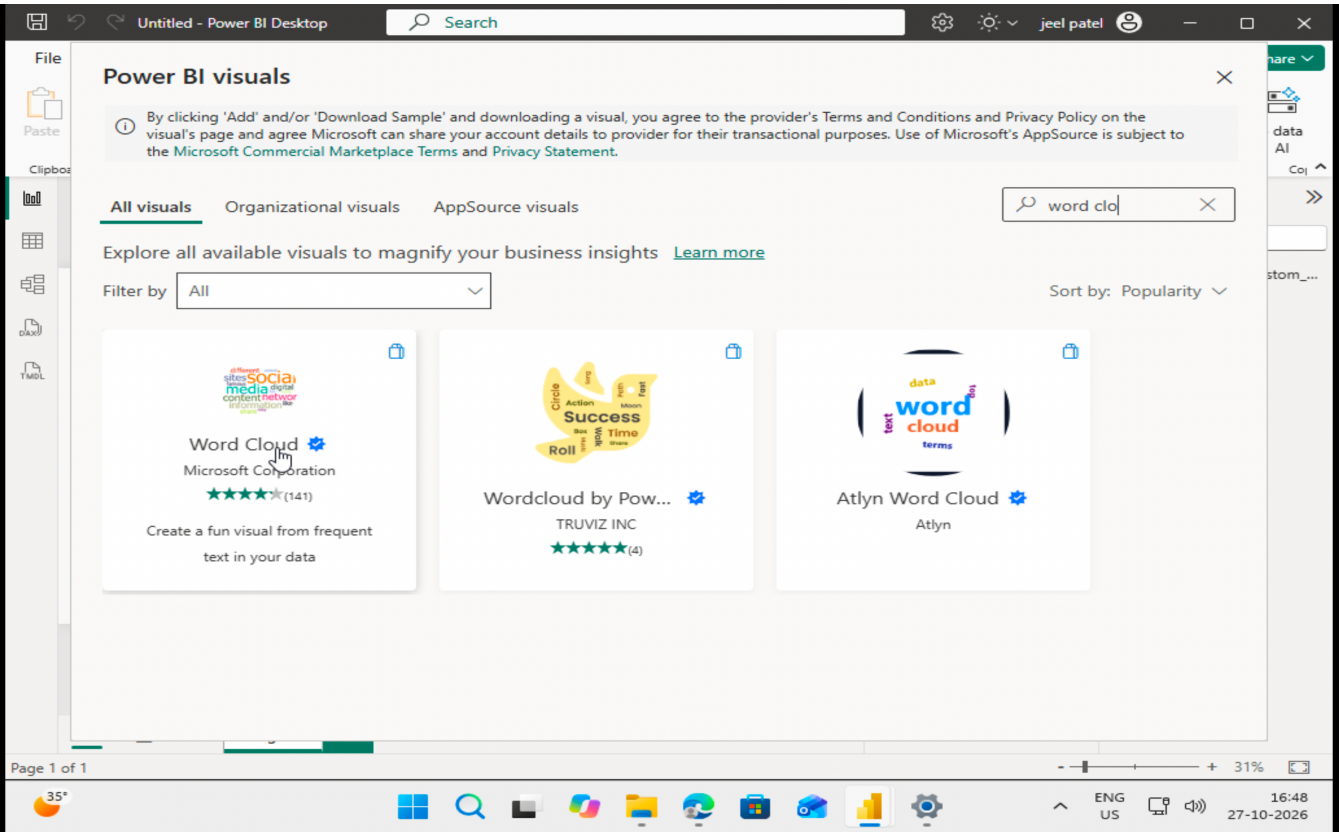

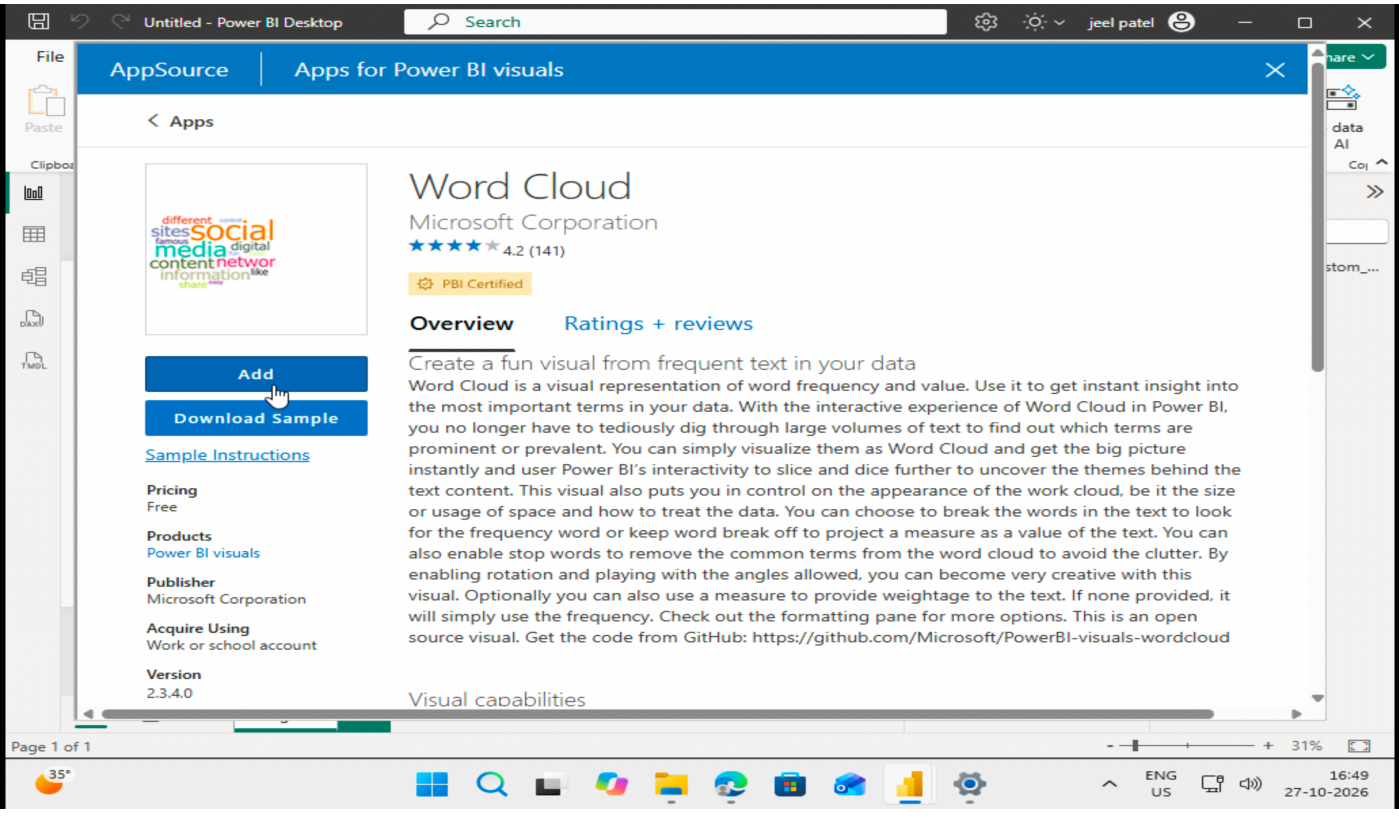

Step 3: Open Microsoft AppSource

- Choose **Get more visuals** or **Get visuals from AppSource**
- The AppSource window opens and displays custom visualizations that can be added to Power BI.
- Use the search box to find a visual that suits your report, such as a **Word Cloud**, **Radar Chart**, **Chiclet Slicer**, or another suitable custom visual.

Step 4: Select a Custom Visual

- Review the visual's description and preview.
- Choose a visual appropriate for the data and report purpose.
- Check the publisher and any certification or privacy details shown before adding the visual.

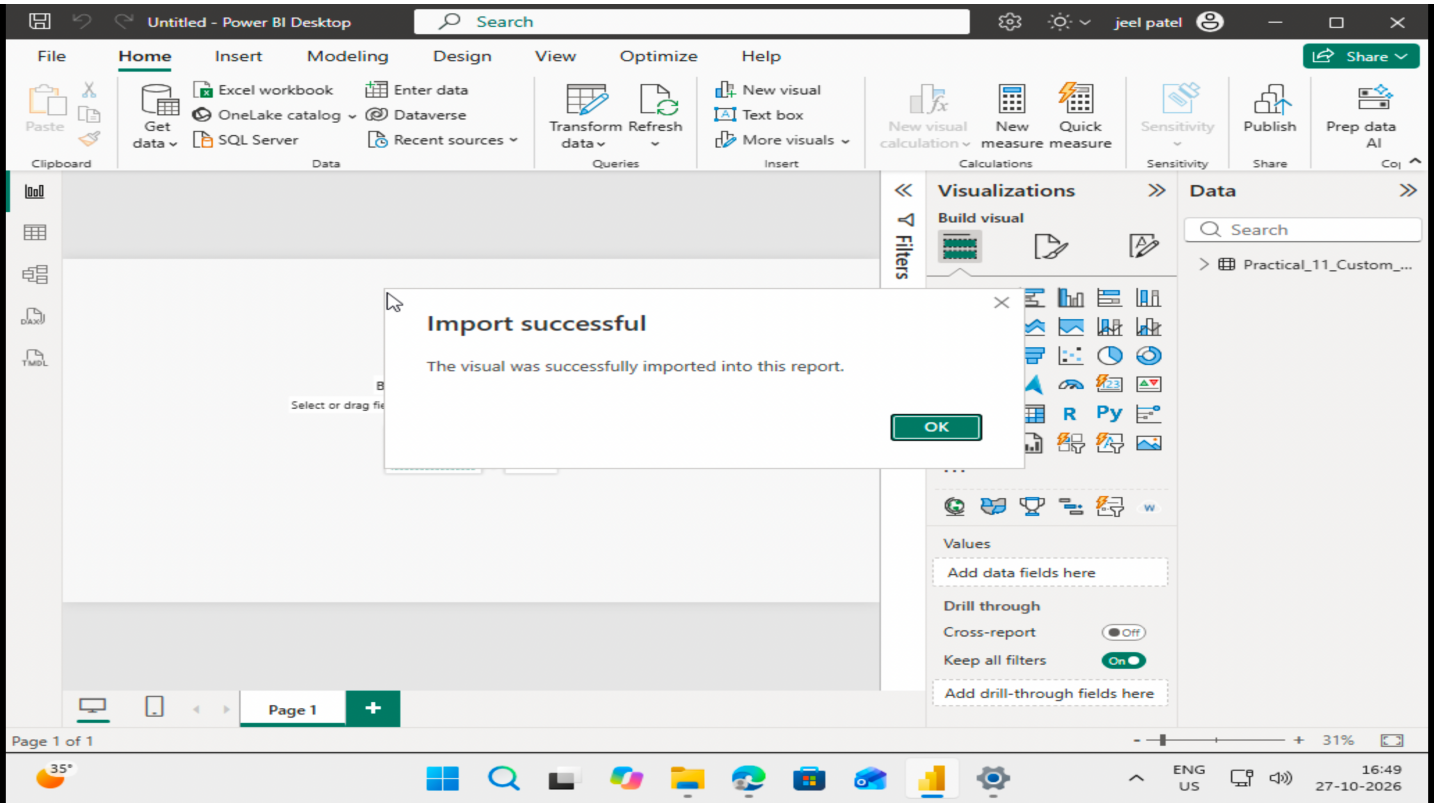

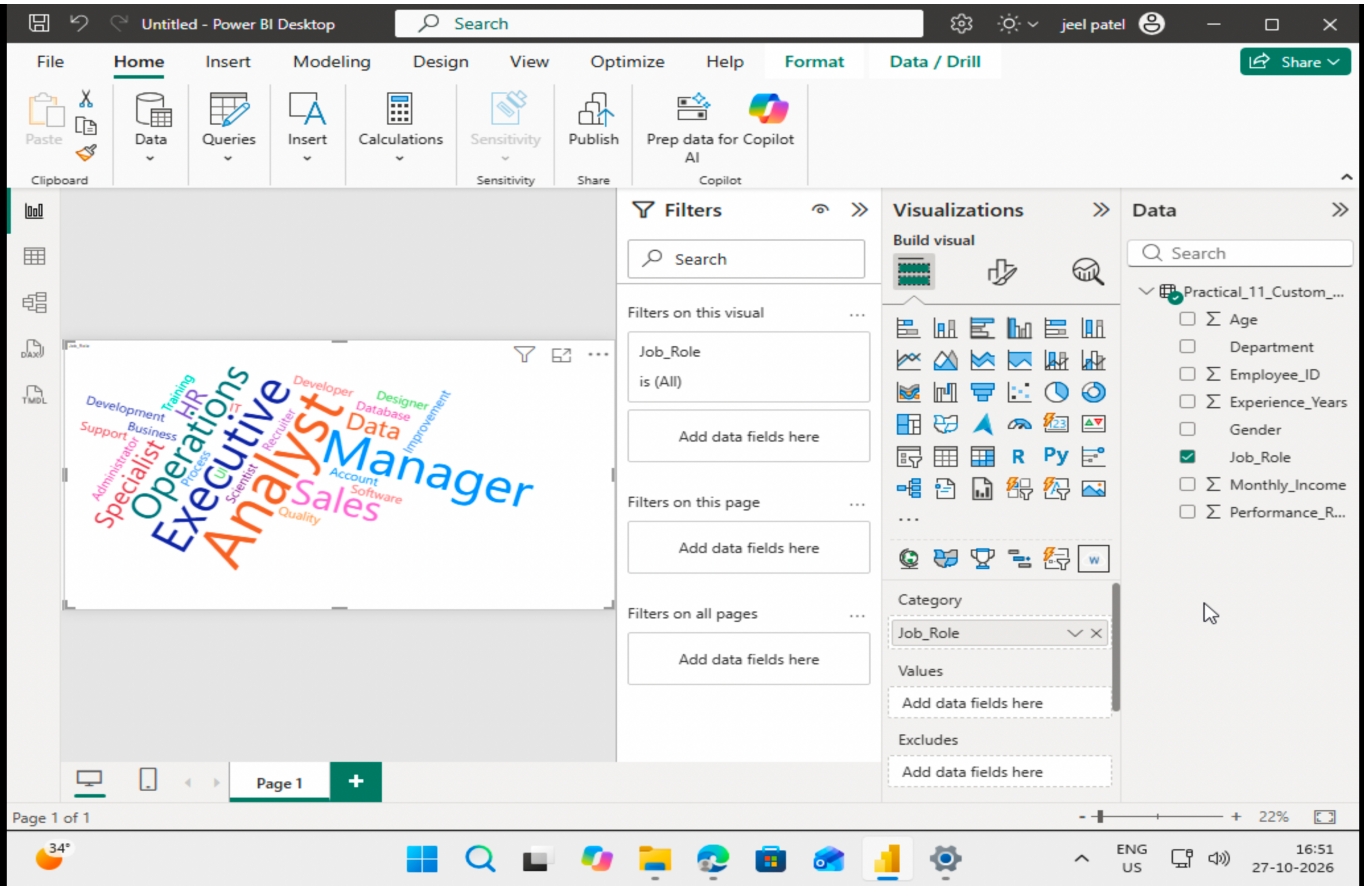

Step 5: Add the Visual to Power BI

- Click **Add** to import the selected visual into Power BI Desktop.
- Wait for the visual to appear in the Visualizations pane.
- Close the AppSource window when the import is complete.

Step 6: Insert the Custom Visual

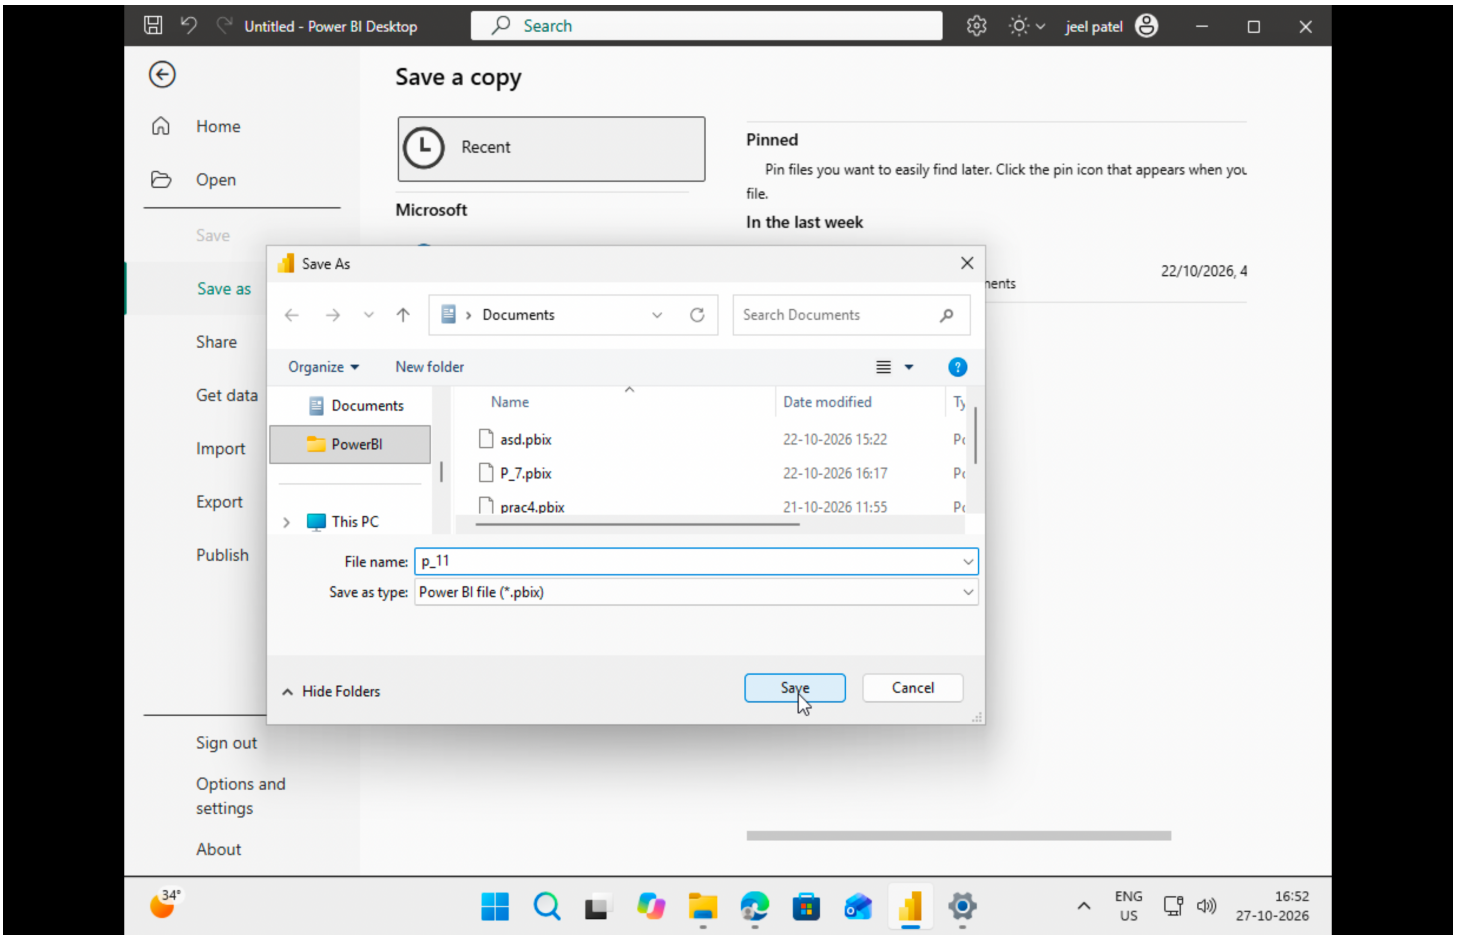

- Click the newly imported custom visual icon in the Visualizations pane.
- A blank visual container appears on the report canvas.
- Resize and position the visual to fit neatly within the dashboard layout.

Step 7 : Save the Report

- Review the report for layout, data, and formatting issues.
- Click **File > Save** or use the Save icon to save the Power BI report (.pbix).
- If required, publish the report to Power BI Service and verify the custom visual in the published report. Availability and behavior can vary by visual and organizational settings.

Result

A custom visual was imported from Microsoft AppSource and added to the Power BI report. Relevant data fields were assigned, formatting was customized, and the visual's interaction with report filters was checked. The report was saved successfully.
